Tenebris Parameters

Input Gain: The input gain parameter dictates how much volume or gain comes into the unit.

Bits: The Bits parameter sets how much or less the unit is going to reduce bits (16 CD quality)

Dry/Wet: The Dry/Wet parameter handles how much of the effect is going to be rendered.

Sample Rate: The sample rate parameter dictates how much or less the unit is going

to reduce in samples (sample rate is tied with your engine sample rate.)

Output Gain: The output gain parameter dictates how much volume or gain comes out of the unit.
